SECTION 01

Brand

Who we are, what we stand for and how we sound.

INTRODUCTION

Technology partner for businesses that are just getting started.

Ruyat Tech designs and builds mobile apps, web apps, websites and automation for small and medium businesses in Saudi Arabia, especially newly established ones.

We are the technology arm of Ruyat Al Enjaz, a Makkah-based company known for business setup and Hajj & Umrah services. Ruyat Al Enjaz helps founders open their business. Ruyat Tech helps them get it online and running on solid software.

Our job is to take an idea that is still blurry and make it clear, buildable and live, without the jargon, the bloat or the enterprise price tag.

Mobile apps
iOS & Android

Web apps
Portals, dashboards, SaaS

Websites
Company sites & landing pages

Automation
Workflows & integrations

NAME & MEANING

Ruyat means vision.

NAME

Ruyat (رؤية) is Arabic for *vision*: the ability to see what isn't built yet. **Tech** tells you how we bring that vision to life.

MISSION

Give every new business in the Kingdom access to software that is well designed, properly engineered and fairly priced.

PROMISE

We see the product before it exists, and then we build it exactly as we saw it.

TAGLINE

Vision, engineered.

PERSONALITY

Five traits, held in balance.

01

Trustworthy

Clear scopes, honest timelines, no surprises.

NOT
Vague, salesy, over-promising

02

Futuristic

Modern stacks, forward-looking design.

NOT
Gimmicky, sci-fi for its own sake

03

Minimal

Only what earns its place on the screen.

NOT
Empty, cold, under-explained

04

Innovative

We look for the smarter way to solve it.

NOT
Experimental at the client's expense

05

Friendly

Founder-to-founder, plain language.

NOT
Casual about quality, overly cute

VOICE & TONE

Talk like a senior engineer who explains things simply.

Clear before clever

Short sentences. One idea at a time. If a non-technical founder can't follow it, rewrite it.

Confident, not loud

State what we'll do and when. No hype words, no exclamation marks.

Warm and direct

Use "we" and "you". Be helpful first, salesy never.

DO

"We'll have a clickable prototype ready for you to review next Thursday."

DON'T

~~"Leveraging cutting-edge synergies to revolutionise your digital journey!!"~~

DO

"Your booking app, live on the App Store, built to grow with you."

DON'T

~~"World-class, best-in-class, next-gen disruptive solutions."~~

VOICE IN USE

The same voice, from headline to error message.

Write it the way we would say it across a table: short, specific, kind. Use sentence case, no exclamation marks and no jargon.

WHERE	◆ WE SAY	WE AVOID
HERO HEADLINE	Vision, engineered.	~~Unleash next-gen digital transformation.~~
SUBHEADING	Mobile apps, web apps and automation for new businesses. From the first idea to launch day.	~~We provide holistic end-to-end solutions.~~
BUTTON	Start a project	~~Click here to get started now!~~
FORM LABEL	Tell us about your idea	~~Please enter your requirements~~
ERROR MESSAGE	That email doesn't look right. Check it and try again.	~~Error 422: invalid input.~~
EMPTY STATE	No projects yet. Start one and it will show up here.	~~Nothing found.~~
SUCCESS	Got it. We'll reply within one working day.	~~Your request has been successfully submitted!~~
EMAIL SUBJECT	Your prototype is ready to review	~~URGENT!!! Don't miss out~~

WORDS WE USE

build · launch · plan · simple · clear · together · on time · yours

WORDS WE AVOID

synergy · disruptive · revolutionary · world-class · cutting-edge · solutions · leverage

SECTION 02

Logo

The Facet Eye mark, the wordmark and how to use them.

02

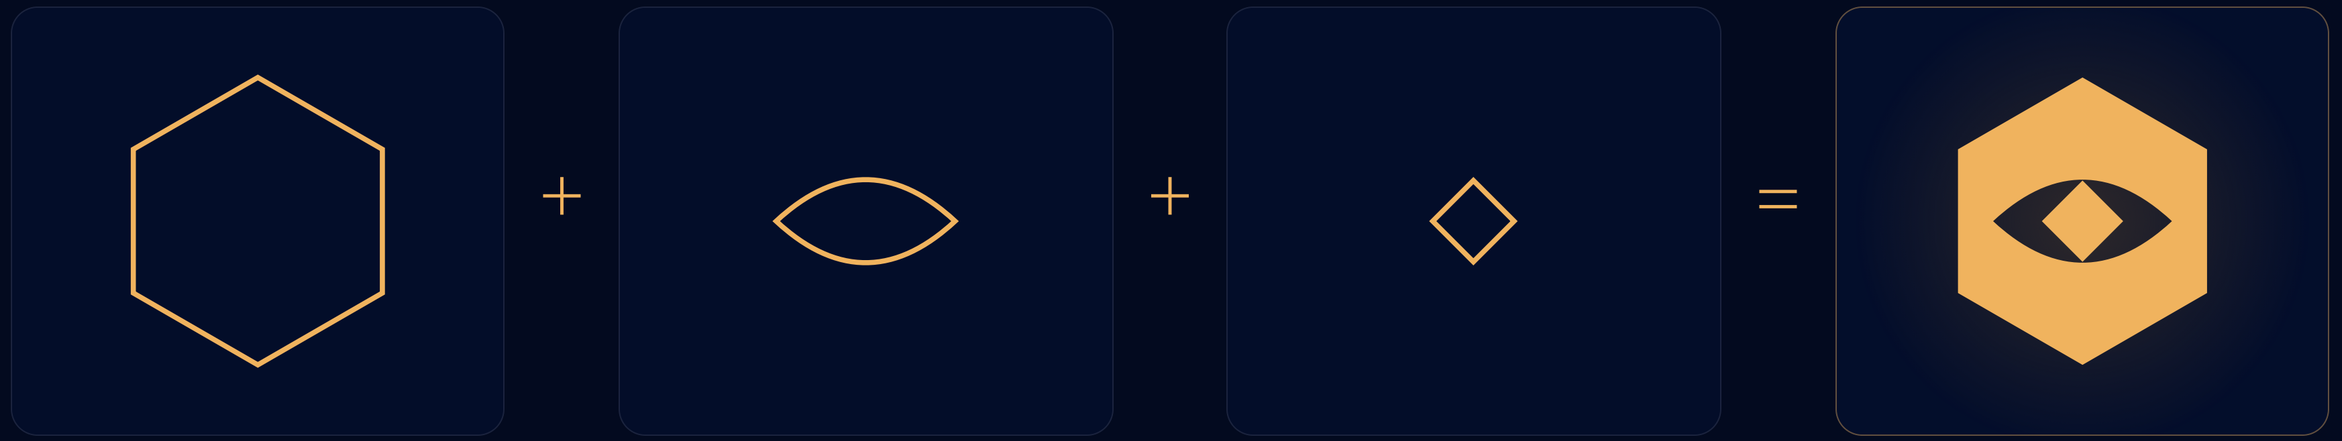
PRIMARY LOGO

The horizontal lockup is our default signature.

Use it wherever there is enough width: website headers, documents, presentations and signage.

THE MARK

Facet Eye: three shapes, one idea.



Hexagon

Structure and engineering. The most efficient shape in nature, and the one honeycomb is built on. It stands for software that is solid by design.

Eye

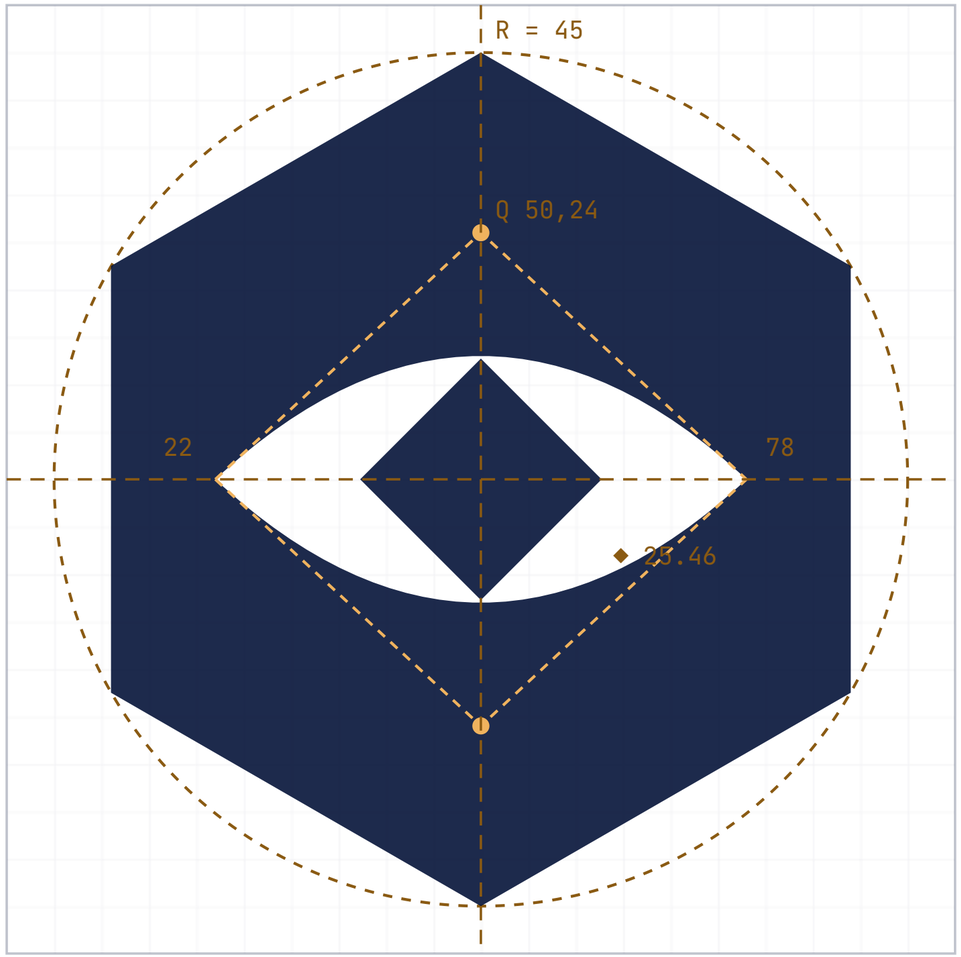
Ruyat, vision. Seeing the product clearly before a single line of code is written.

Diamond pupil

Focus and value: the single point everything is built around. It also becomes our bullet and cursor (see 05).

Facet Eye

A vision held inside a structure. Ideas, engineered.



CONSTRUCTION

Built on a regular hexagon.

All geometry sits on a 100-unit grid. Use the master SVG files and never redraw the mark.

HEXAGON

Pointy-top regular hexagon, circumradius 45, centred at 50,50. Width 78 × height 90.

EYE

Two quadratic curves from 22,50 to 78,50 with control points at 50,24 and 50,76. Aperture 56 × 26.

PUPIL

Square rotated 45°, diagonal 25.46, centred at 50,50.

FILL RULE

Even-odd: one single-colour shape, so it reproduces cleanly in one ink.

LOGOTYPE

Ruyat in Bold, Tech in Regular.

The weight contrast puts the name forward and lets the discipline follow.
The wordmark is outlined, so never retype it.

TYPEFACE

Satoshi Bold / Regular, tracking −1.2%

COLOUR ON DARK

Ruyat · White Tech · Vision Gold

COLOUR ON LIGHT

Ruyat · Navy Tech · Deep Gold

LOCKUP RATIO

Cap height = 0.40 × mark height. Gap = 0.25 × mark height.

VARIATIONS

One system, five formats.

HORIZONTAL · PRIMARY

STACKED · SQUARE SPACES

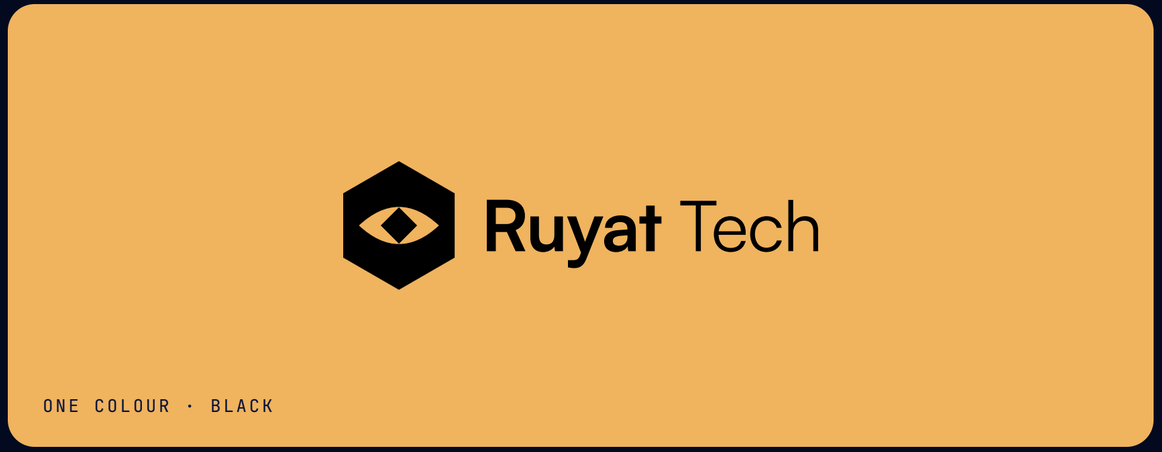
ENDORSED · FORMAL & PARTNER USE

MARK · ICONS, AVATARS

WORDMARK · WHEN THE MARK IS ALREADY PRESENT

COLOURWAYS

Four approved versions.



CLEAR SPACE & SIZING

Give it room to breathe.

Clear space on every side equals X, where X is half the mark's width.
Nothing (text, edges, images) enters this zone.

HORIZONTAL · MIN

Ruyat Tech

120 px wide · 30 mm print

STACKED · MIN

Ruyat Tech

64 px wide · 18 mm print

MARK · MIN

Standard mark down to 40 px. Below that, use the micro mark.

MICRO MARK

A sharper eye for tiny sizes.

At 32 px and below, the standard pupil merges with the eyelids. The micro mark opens the eye (aperture 66 × 32) and shrinks the pupil so a gap of at least one pixel survives at 16 px.

STANDARD

MICRO

Favicons, browser tabs, menu-bar and notification icons all use the micro mark. Files are in `/favicon` and `/logo/svg/*-micromark-*`.

BACKGROUNDS

Calm surfaces only.

MISUSE

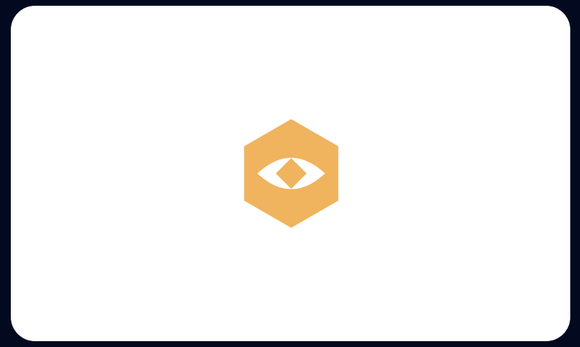
Protect the signature.

✕ Don't stretch or squash

✕ Don't rotate

✕ Don't recolour outside the palette

✕ Don't add effects or shadows



✕ Don't use gold mark on white (1.9:1 contrast)

✕ Don't rearrange the elements

✕ Don't place on busy imagery

✕ Don't outline the mark

SECTION 03

Colour

Deep-space darks, lit by a single warm signal.

CORE PALETTE

Five colours do almost all the work.

Vision Gold

Signal colour. The mark, CTAs, highlights. Use sparingly so it stays bright.

HEX	#F0B35E
RGB	240 179 94
CMYK	0 25 61 6

Midnight Navy

Brand surface. Inherited from Ruyat Al Enjaz to tie the family together.

HEX	#041238
RGB	4 18 56
CMYK	93 68 0 78

Void

Primary background. Darker than navy: the space our light sits in.

HEX	#030A1F
RGB	3 10 31
CMYK	90 68 0 88

Deep Gold

Gold for light backgrounds and small text, where Vision Gold lacks contrast.

HEX	#8A5A12
RGB	138 90 18
CMYK	0 35 87 46

Frost

Text on dark and light surfaces. A cool off-white, never pure grey.

HEX	#EEF1F8
RGB	238 241 248
CMYK	4 3 0 3

EXTENDED SCALES

For interfaces, charts and states.

Ringed swatches are the core colours. In code, always reference tokens (e.g. `--rt-gold-500`) rather than raw HEX values.

GOLD

50	100	200	300	400	500	600	700	800	900
#FEF7EC	#FCEBD0	#F9DAA8	#F6C887	#F3BD71	#F0B35E	#D3943D	#AE7424	#8A5A12	#5A3A0B

INK

50	100	200	300	400	500	600	700	800	900	950
#F7F8FC	#EEF1F8	#D3D8E5	#A7B0C8	#7A86A6	#4F5F8C	#2A3D74	#142A63	#0A1C4A	#041238	#030A1F

SIGNAL · UI STATES ONLY

Success	Warning	Error	Info
#3DD68C	#FF9F43	#FF5C6C	#5B8CFF

PROPORTION & GRADIENTS

Mostly dark. A little light.

60%
Void

22%
Navy

10%
Frost

6%

Horizon glow

Radial gold, 35% → 0%. Behind hero content and the horizon arc only.

Deep space

Void → Ink 800. Section and card backgrounds.

Gold edge

Lumen → Gold → Gold 700. Thin borders and key highlights. Never as a large fill.

ACCESSIBILITY

Contrast is part of the brand.

WCAG 2.2 ratios for our most common pairs. Body text must reach AA (4.5:1) or higher.

IBM Plex Sans Arabic

Regular 400 / Medium 500 / SemiBold 600

نصمّم ونبني تطبيقات الجوال والمواقع والأتمتة للأعمال الصغيرة والمتوسطة.

ARABIC IN USE

Same brand, mirrored layout.

01 **Never track Arabic**
Letter-spacing breaks the joins between letters. Set it to 0, even in headlines. The negative tracking used for Satoshi is Latin-only.

02 **Give it more height**
Line height 1.25 for headlines and 1.75 for body. Arabic marks sit above and below the line.

03 **Mirror the layout, not the logo**
Flip page layout and arrows in RTL. The logo and mark never flip, and the name stays Ruyat Tech.

04 **Western digits by default**
Use 0–9, as in the Latin brand, unless the content calls for Arabic-Indic numerals.

TYPE SCALE

Big contrast, tight headlines, relaxed text.

Desktop sizes. On mobile, scale display sizes by 0.6 and keep body at 16 px.

DISPLAY · 96/0.95 · -4.5%

Vision, engineered.

H1 · 56/1.05 · BOLD · -3.5%

We build what you can see.

H3 · 28/1.2 · BOLD · -2%

Apps, websites and automation for new businesses

BODY · 18/1.6

From the first sketch to the App Store, we handle design, engineering and launch, so you can focus on running your business.

R/29 21.4225°N · 39.8262°E

SECTION 05

Graphic language

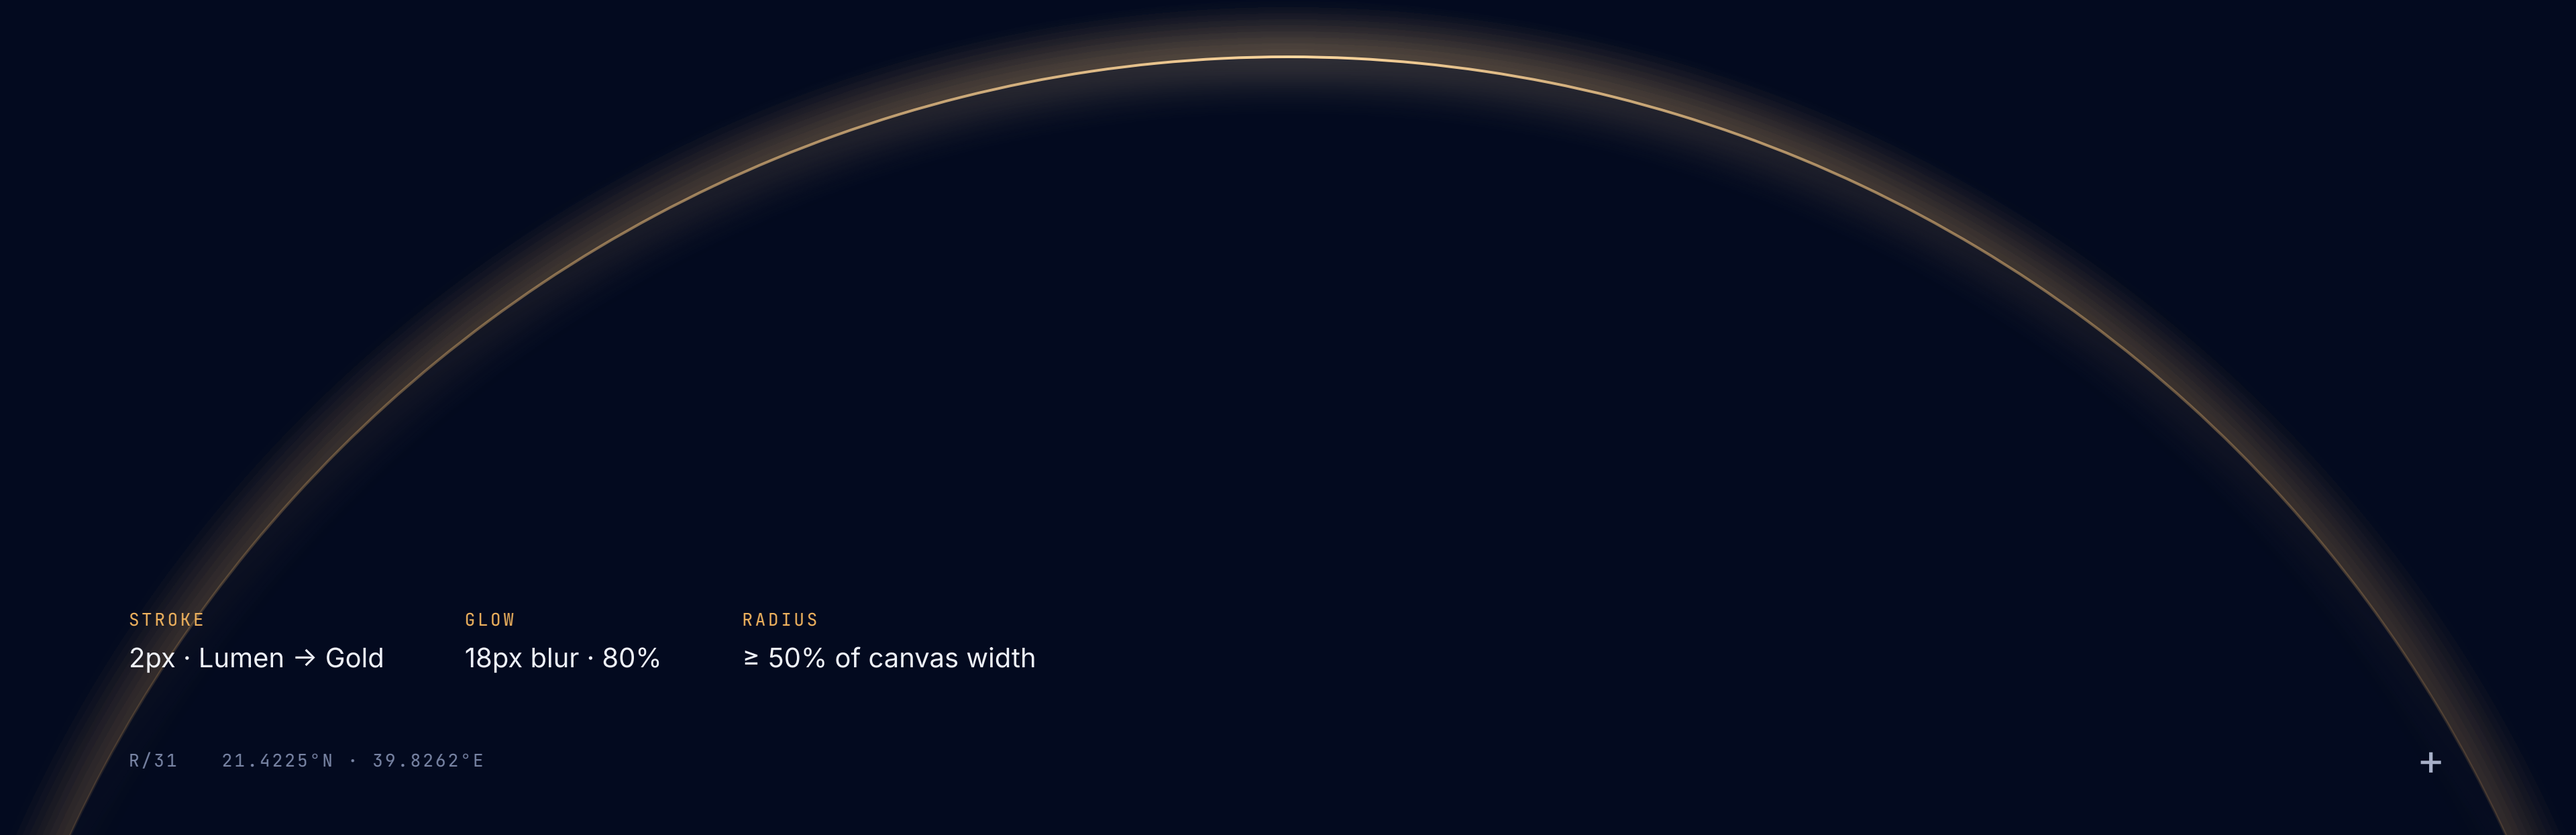
Light on the horizon, structure underneath.

05

HORIZON ARC

A line of light on the edge of what's next.

The arc echoes the upper lid of the eye. Use one arc per layout, rising from the bottom edge or framing the headline. Keep it thin (1–2 px) with a soft gold glow.



STROKE
2px · Lumen → Gold

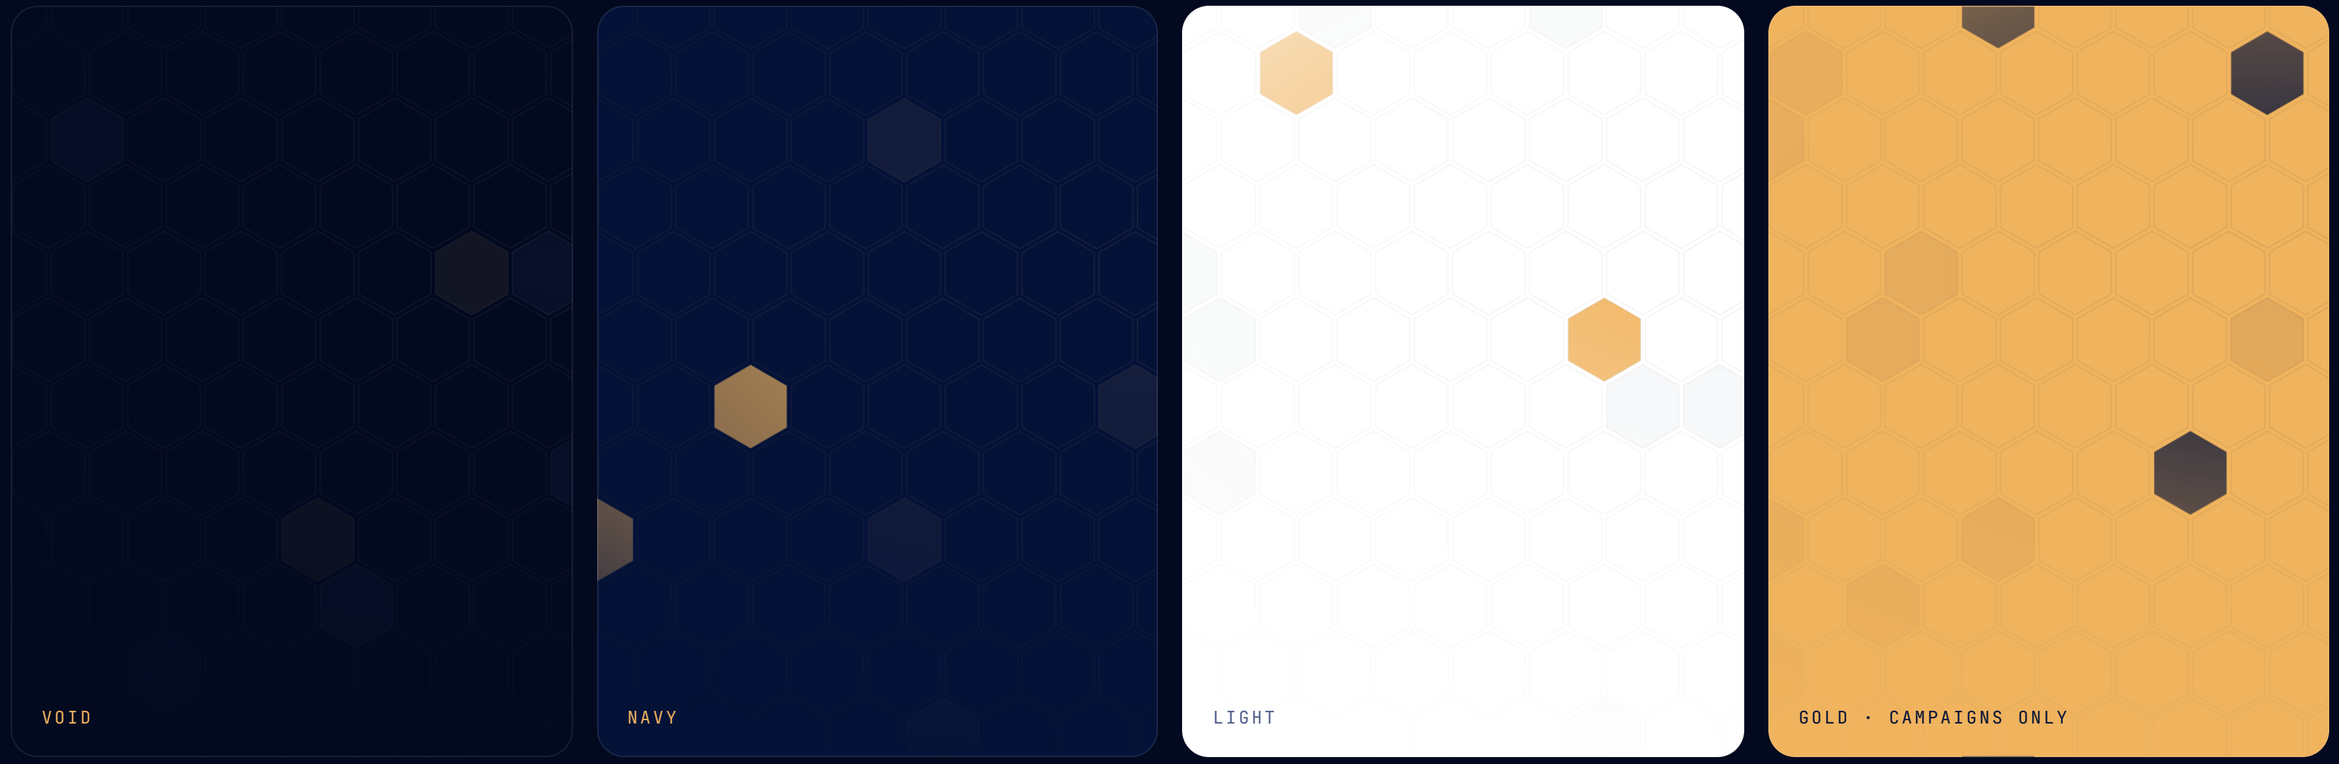
GLOW
18px blur · 80%

RADIUS
≥ 50% of canvas width

FACET LATTICE

The hexagon, repeated into a system.

A pointy-top hex grid at 8–16% opacity, with a few cells lit in gold (about 2%). Fade it out from one corner so it never competes with content.



R/32 21.4225°N · 39.8262°E

INTERFACE DETAILS

Small signals that feel like instruments.

- Design sprint
- Build & QA
- Launch & support

MAKKAH · 21.4225°N 39.8262°E

◆ NOW BOOKING PROJECTS

R/05 — PROCESS

BUILD 2026.11

The pupil ◆

The diamond from the mark becomes our bullet, status dot, loader and cursor focus. Always gold, always 45°.

HUD labels

JetBrains Mono, uppercase, +14% tracking, 12–14 px. Use for coordinates, section indexes, status and metadata.

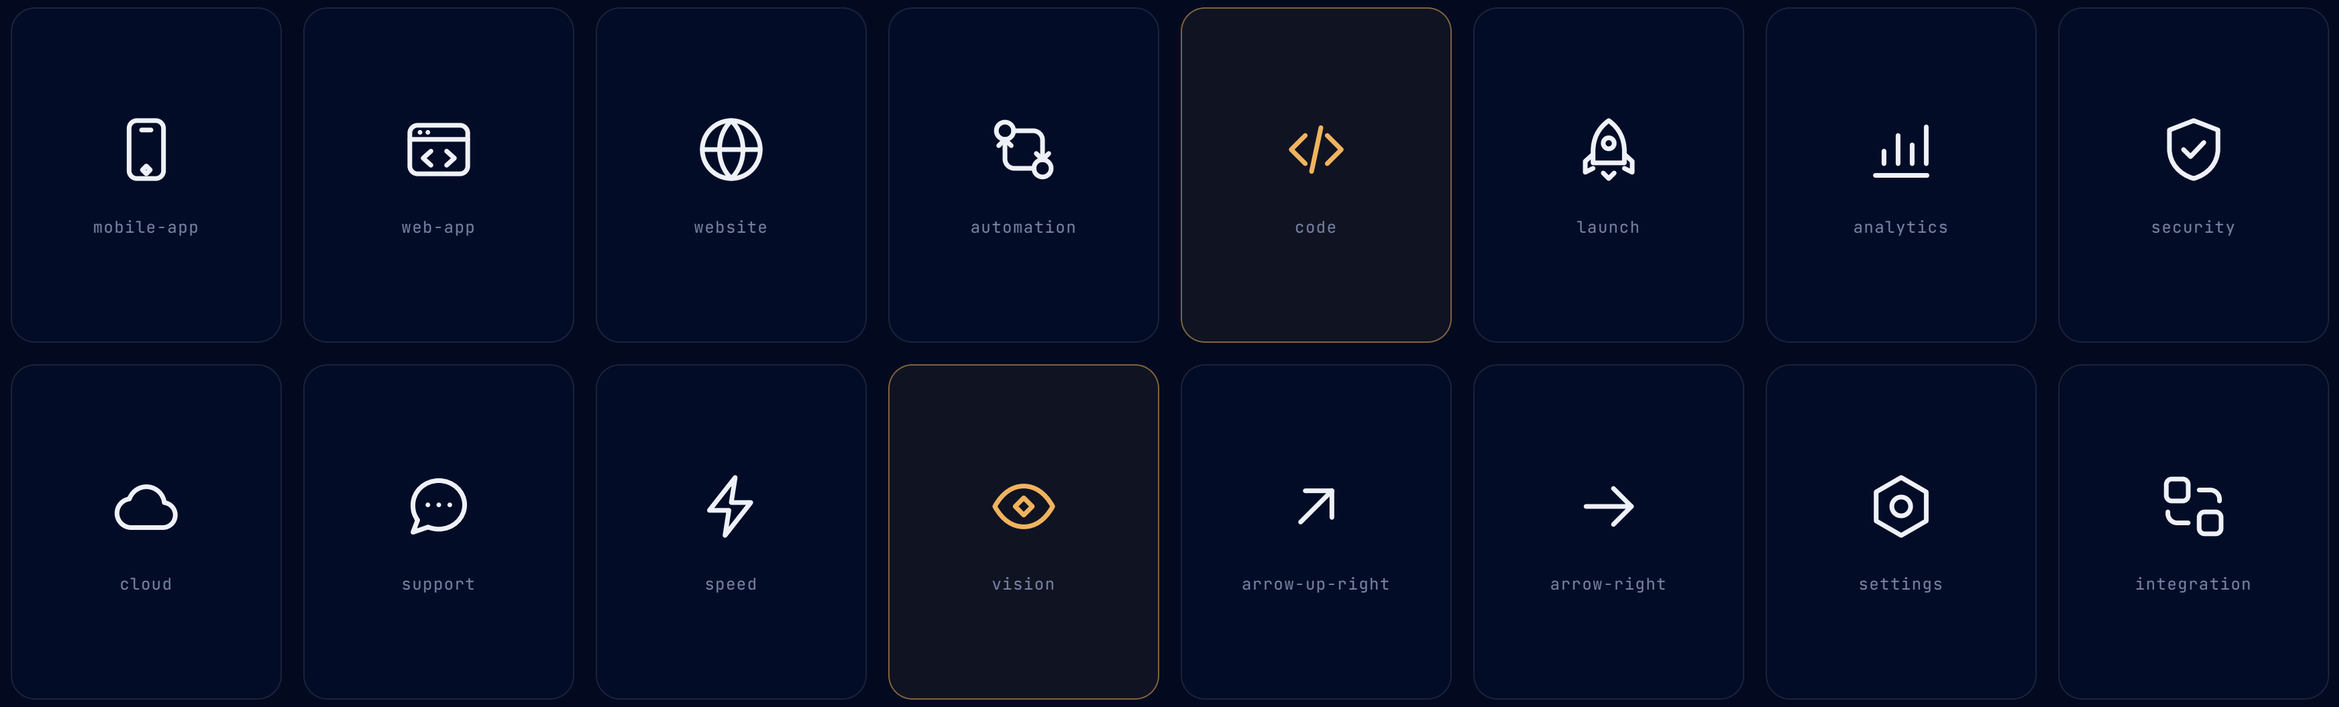
Column lines

Hairline vertical rules (1 px, Frost at 6–10%) expose the grid in heroes and section openers, like a blueprint.

ICONOGRAPHY

Line icons drawn on the same rules.

24 px grid · 1.5 px stroke · round caps and joins · 2.75 px padding. Use Frost by default and gold only for the active or highlighted state. Starter set in `/icons`.



UI COMPONENTS

Core tokens in use.

Full token set: `/tokens/tokens.css`, `tokens.json` and the Tailwind presets.

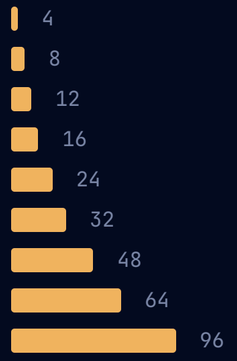
RADIUS

SPACING · 4 PT BASE



IMAGERY

Show the real product, lit from within.

Images should feel like a dark studio with one warm light. They show what we build, not stock clichés. Until real project photos exist, use clean device mockups on the brand backgrounds.

SUBJECT

Real screens, devices and people at work. Founders and our team in natural moments.

LIGHT

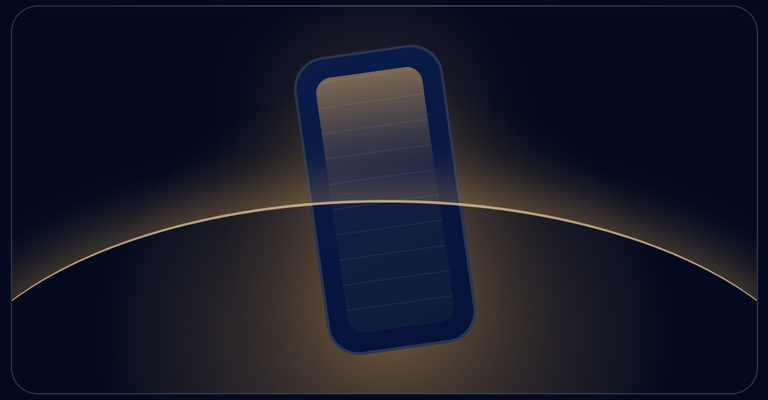
One warm key light in gold. Deep navy shadows. Soft glow around the product.

COLOUR

Keep photos within navy, frost and gold. Desaturate everything else.

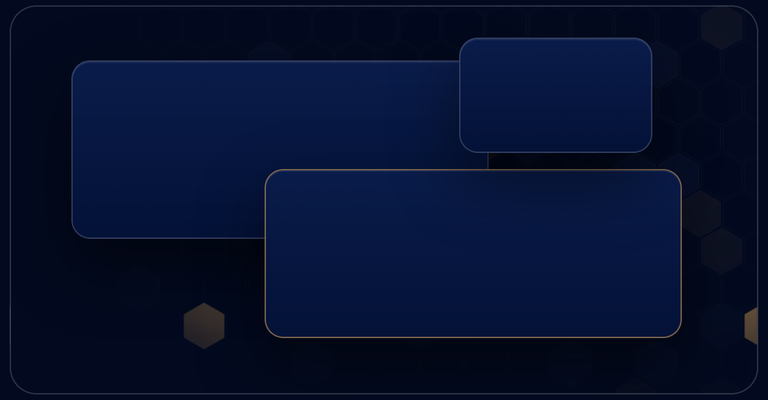
COMPOSITION

Generous empty space. Product at 60–70% of the frame. Tilt no more than 10°.



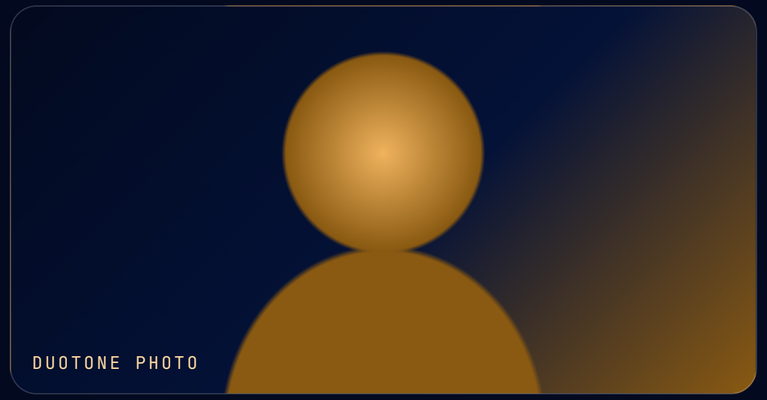
A · DEVICE ON DARK

Phone or laptop floating on Void with a soft gold halo and the horizon arc.



B · INTERFACE OVER LATTICE

Cropped interface cards layered over the facet lattice, with depth and a light edge.



C · DUOTONE PORTRAIT

People and workplace photos in a navy to gold duotone, so any photo fits the brand.

IMAGE TREATMENTS

A few rules that make any photo ours.

DUOTONE RECIPE

Shadows Void → mids Navy / Deep gold → highlights Gold / Lumen

```
filter: grayscale(1) contrast(1.05);
mix-blend-mode: screen over gradient
background: linear-gradient(135deg,
  #041238, #8A5A12 70%, #F0B35E);
```

FRAME

Radius 20 px (12 px on small cards) · 1 px hairline in Frost 10% · optional gold glow on hero images only · no drop shadows on white.

AVOID

- × Stock handshakes, laptops with coffee, people pointing at screens
- × Bright white or cluttered backgrounds
- × Full-colour clip art, emoji and 3D blobs
- × Heavy filters, glitch and neon effects
- × Real client data or private information in screenshots

SECTION 06

Motion

Soft, easy, unhurried.

06

MOTION PRINCIPLE

Easy flow, never a performance.

Motion on our website should feel like breathing: gentle, continuous and almost unnoticed. Elements drift into place and settle softly. Nothing snaps, bounces, spins or shouts. If a visitor notices the animation before the content, it is too much.

01

Soft arrivals

Fade up a short distance (20 px) and settle with a long ease-out. Elements arrive, they never pop.

02

One flow at a time

Stagger siblings by 70 ms so the page reads top to bottom like one gesture. Never animate everything at once.

03

Calm in the background

Ambient motion (the lattice) is slow, low contrast and keeps away from text. It adds atmosphere, not attention.

04

Quick, quiet feedback

Hover and press respond in 160 ms with small changes: a 2 px lift, a gold glow, an underline that slides.

◆ DO

Opacity and small translate · long ease-out · stagger · gentle glow · one focal motion per view

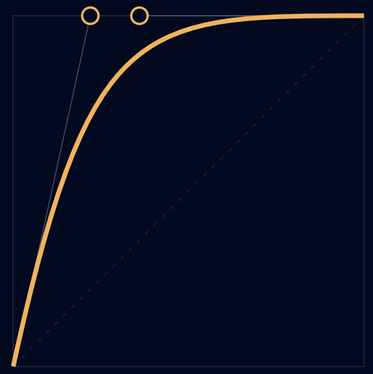
× AVOID

Bounce or elastic easing · spin and flip · parallax-heavy scroll-jacking · fast flashing · motion over body text

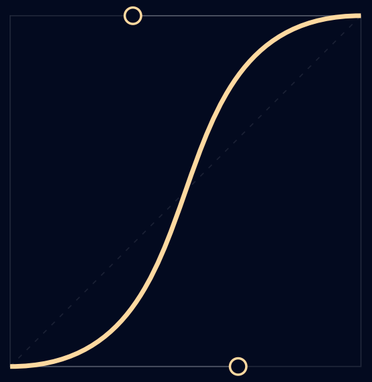
TIMING & EASING

Fast to respond, slow to settle.

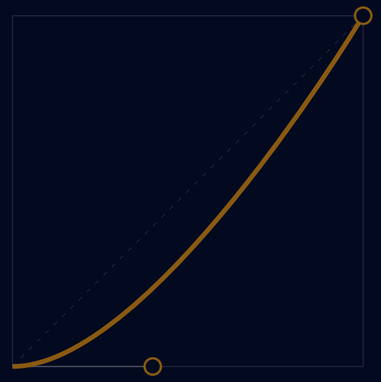
One easing curve does most of the work: it starts quickly and decelerates for a long, soft landing. Durations stay short for feedback and generous for reveals.



Ease out · default
`cubic-bezier(.22, 1, .36, 1)`
Reveals, hovers, menus



Ease in-out
`cubic-bezier(.65, 0, .35, 1)`
Ambient loops, fades out



Ease in
`cubic-bezier(.4, 0, 1, 1)`
Exits only, use rarely

instant	100 ms	Colour and focus changes
fast	160 ms	Hover, press, toggles
base	280 ms	Menus, tabs, cards
slow	600 ms	Scroll reveals, page load
ambient	8 s	Lattice beam and loops

STAGGER 70 ms between siblings, up to 6 · REVEAL DISTANCE 20 px

FACET LATTICE IN MOTION

Three ways the grid comes alive.

Always behind content, always slow. Use one per section, and vary them across the site: a flash on the hero, a beam between sections, a pulse for a calm spotlight. Never stack more than two.

01 · FLASH

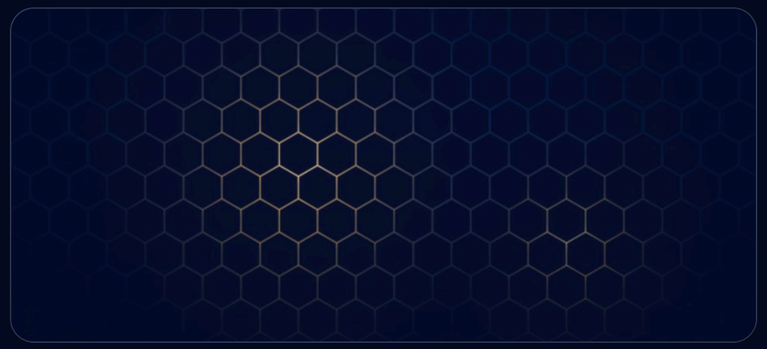
Tile flash

Random tiles light up in gold and fade out like a slow heartbeat. In 400 ms, out 1.2 s. Max 4 tiles at once, 0.6–1.2 s apart, peak fill 14%.

02 · BEAM

Edge beam

A soft comet travels only along the connected hexagon edges, turning at corners. Slow: 60 px/s with a 320 px tail. Variation *drift*: two fainter beams, 40 px/s, 460 px tail.



03 · PULSE

Pulsating edge light

A light source breathes behind the grid, a 7 s swell and fade. Tiles stay dark; light shows through the edges only, brightest near the source, and follows it as it drifts slowly.

SAFETY

Pauses off-screen and in hidden tabs

TEXT

Dims to 25–35% behind headlines and cards

REDUCED MOTION

Static lattice, no flash, beam or pulse

CODE

```
mode: 'flash' | 'beam' | 'pulse' | 'all'
```

MOTION IN USE

A page that arrives gently.

On load, content settles in sequence: label, headline, text, buttons. Interactions answer quietly. Everything respects the visitor's reduced-motion setting.
